PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience building Java backend services, REST APIs, integration services, and distributed enterprise systems in regulated financial-services environments. Designed server-side processing for 10,000+ infrastructure records using pagination, filtering, optimized request processing, and reusable services. Owns architecture modernization, performance analysis, secure integrations, production troubleshooting, and delivery across Java/Tomcat, Kubernetes, Docker, and Linux environments.

CORE COMPETENCIES

Java Backend Engineering

REST APIs & Integration Services

Distributed Systems

High-Volume Processing

System Design & Architecture

Performance Engineering

Production Reliability

Kubernetes, Docker & Linux

WORK EXPERIENCE

CITIGROUP

April 2016 - Present

Senior Infrastructure as Code Engineer / Full-Stack Software Engineer

Irving, TX

- Develop Java backend components, REST APIs, integration services, validation logic, data transformations, and server-side processing for enterprise infrastructure workflows.
- Enabled efficient processing of 10,000+ infrastructure records through server-side pagination, filtering, improved request processing, reusable services, and efficient data-retrieval patterns.
- Apply system-design principles, modular architecture, object-oriented programming, SOLID principles, design patterns, and separation of concerns across backend, middleware, frontend, and integration layers.
- Diagnose production issues across Java applications, middleware, networking, APIs, certificates, mTLS, authentication, deployment environments, and infrastructure services; perform root-cause analysis and implement corrective and preventive solutions.
- Analyze application and infrastructure performance to identify bottlenecks in data retrieval, request processing, UI rendering, deployment workflows, and overall system behavior.
- Serve as a primary engineer modernizing a legacy enterprise load-balancer platform from AngularJS to React while retaining and extending Java/Tomcat backend services.
- Build and maintain CI/CD pipelines for automated build, testing, deployment, and controlled DEV, UAT, and PROD promotion using TeamCity, GitHub, Kubernetes, OpenShift, Harness, and Ansible.
- Partner with application developers, infrastructure engineers, security teams, product owners, architects, and technical leadership throughout requirements, design, development, testing, deployment, and production support.
- Use AI development tools and advanced prompt engineering for code analysis, development, troubleshooting, testing, documentation, and modernization while maintaining engineering review, security, and quality standards.

PROJECTS

Enterprise Load Balancer Platform Modernization

Modernized an AngularJS and Java enterprise application into a React and Java/Tomcat platform for load-balancer management, secure authentication, large-dataset processing, CI/CD, and production deployment.

Java, Tomcat, REST, React, Kubernetes, OpenShift

AVI / NSX-T Infrastructure Integration

Designed a cross-platform workflow that transfers load-balancer information between AVI and NSX-T processes, reducing duplicate entry and improving request accuracy and interoperability.

REST Integration, Java, Networking, mTLS

EDUCATION

Bachelor's Degree - Information Technology / Software Engineering	University of Phoenix	2014
--	---------------------------------------	------

CERTIFICATIONS

CompTIA A+ Certification	CompTIA	2016
--------------------------	-------------------------	------

SKILLS

Programming & Backend: Java, SQL, JavaScript, TypeScript, Python, Bash / Shell, Groovy, REST APIs, Object-Oriented Programming, SOLID Principles, Design Patterns

Platforms & Systems: Kubernetes, Red Hat OpenShift, Docker, Linux, Tomcat, Containerized Development and Deployment

Delivery & Operations: TeamCity, GitHub, Harness, Ansible, CI/CD, Automated Builds, Deployment Automation, DEV / UAT / PROD Promotion

Security & Reliability: mTLS, Certificates, Authentication, Secure Application Integration, Production Support, Root-Cause Analysis, Performance Engineering
