PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience designing, developing, modernizing, and supporting scalable enterprise software systems in highly regulated environments. Builds Java backend components, REST APIs, integration services, and reusable server-side solutions for large, distributed infrastructure workflows. Enabled efficient processing of 10,000+ records through server-side pagination, filtering, optimized request processing, and data-retrieval patterns. Brings hands-on ownership across system design, performance, reliability, security, testing, deployment, and production support using Docker, Kubernetes, OpenShift, and Linux.

CORE COMPETENCIES

Java Backend Engineering

REST APIs & Integration Services

Distributed & Scalable Systems

Performance Engineering

Reliability & Production Ownership

Secure Application Integration

Docker, Kubernetes & OpenShift

System Design & Reusable Services

WORK EXPERIENCE

CITIGROUP

April 2016 - Present

Senior Infrastructure as Code Engineer / Full-Stack Software Engineer

Irving, TX

- Develop Java backend components, REST APIs, integration services, validation logic, data transformations, and server-side processing for large enterprise infrastructure datasets and distributed workflows.
- Enabled efficient processing of 10,000+ infrastructure records, improving scalability, performance, and responsiveness through server-side pagination, filtering, optimized request processing, reusable services, and efficient data-retrieval patterns.
- Apply system-design principles, modular architecture, Object-Oriented Programming, reusable design patterns, and separation of concerns across frontend, middleware, backend, and infrastructure integration layers.
- Design integrations between infrastructure platforms that transfer configuration and load-balancer information across workflows, reducing repetitive data entry and improving request accuracy and operational efficiency.
- Diagnose complex production issues spanning Java applications, middleware, networking, APIs, certificates, mTLS, authentication, deployment environments, and infrastructure services; implement corrective and preventive solutions that improve reliability and availability.
- Analyze application and infrastructure performance to identify bottlenecks affecting data retrieval, request processing, UI rendering, deployment workflows, and overall system performance.
- Build and optimize CI/CD pipelines for automated build, testing, deployment, and controlled promotion across DEV, UAT, and PROD using TeamCity, GitHub, Kubernetes, Red Hat OpenShift, Harness, and Ansible.
- Serve as a primary engineer modernizing a legacy AngularJS load-balancer application to React while retaining and enhancing Java/Tomcat backend services for enterprise deployment.
- Contribute architecture and integration designs for direct VM create, update, and delete lifecycle operations, reducing legacy dependencies and simplifying infrastructure workflows.
- Partner with application developers, infrastructure engineers, security teams, product owners, architects, and technical leadership across requirements, architecture, development, testing, deployment, and production support.
- Identify engineering risks, environmental constraints, dependencies, and delivery impediments early and develop mitigation strategies that maintain security, reliability, availability, and delivery objectives.

SKILLS

Backend & Application Engineering: Java, REST APIs, SQL, Application Integration, Object-Oriented Programming, SOLID Principles, Design Patterns

Distributed Systems & Performance: Distributed Systems Concepts, Scalability, Reliability, Availability, Performance Engineering, Server-Side Processing

Cloud-Native & Systems: Docker, Kubernetes, Red Hat OpenShift, Linux, Containerized Development and Deployment, Bash / Shell

Security & Production: mTLS, Certificates, Secure Application Integration, Production Support, Incident Troubleshooting, Root-Cause Analysis

Delivery & Automation: TeamCity, GitHub, Harness, Ansible, CI/CD, Automated Builds, Deployment Automation, Infrastructure as Code

Additional Languages & Frontend: Python, JavaScript, TypeScript, Groovy, React, Next.js, AngularJS, HTML5, CSS3, Tailwind

PROJECTS

Enterprise Load Balancer Platform Modernization

Modernized an AngularJS/Java enterprise application into a React and Java/Tomcat platform supporting load-balancer management, large infrastructure datasets, server-side pagination, filtering, authentication, certificate and mTLS security, CI/CD, and production deployment.

Java/Tomcat, REST, React, AVI, NSX-T

AVI / NSX-T Infrastructure Integration

Designed a cross-platform workflow that transfers selected load-balancer information into the appropriate NSX-T workflow, reducing duplicate data entry, improving request accuracy, and simplifying infrastructure operations.

Java, REST Integration, Networking

VMaaS Architecture Redesign

Contributed architecture and integration designs supporting direct VM create, update, and delete lifecycle operations between infrastructure systems, reducing legacy dependencies and improving maintainability.

System Design, Integration Services, Infrastructure Automation

EDUCATION

Bachelor's Degree - Information Technology / Software Engineering [University of Phoenix](#)

2014

CERTIFICATIONS

CompTIA A+ Certification
